

A faster path to the cloud

Hosted Private Cloud

Hosted Private Cloud is a single-tenant, dedicated environment, to alleviate security and control concerns. It is offered by OVHcloud as a bundle of VMware virtualisation software and physical infrastructure, including server hardware, storage, network gear, and datacentre space, with all that is needed to keep it running. The infrastructure is deployed, managed and maintained by OVHcloud, while virtual machines, applications and data are operated by the customer.

Thanks to VMware's technology ecosystem, IT managers can choose how they will adopt the cloud. They can outsource resources for all workloads, specific ones, or expand an on-premises infrastructure by building a hybrid cloud.

Best of VMware technology

- Built on the same platform you deploy on-premises today, including vSphere, vCenter, NSX and vSAN
- Built on the foundation of the VMware Software-Defined Datacentre (SDDC)

Software

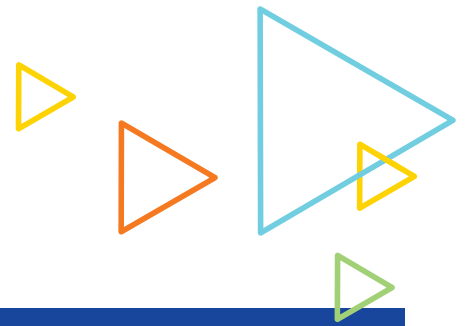

Seamless IT Integration, with vCenter & vSphere-as-a-service

Hardware

Immediate access to a dedicated infrastructure, based on the latest Intel processors

Network

Global fibre-optic network, with guaranteed bandwidth, unlimited traffic, and no hidden fees

Hosted Private Cloud

A software-defined datacentre you can trust

<h3>Secure Network</h3> <p>Extensive security services with NSX included, firewall, load balancer, security rules via vSphere</p>	+	<h3>Scalable Computing</h3> <p>vSphere + Licence Enterprise Plus included for all your VMs + hosts on fully-dedicated environment</p>	+	<h3>Reliable Storage</h3> <p>Host-based storage for maximum performance, based on high-end Intel hardware</p>

Connectivity

Interconnect your on-premises and cloud-based resources in a secure private network, with OVHcloud Connect.

An integrated ecosystem

A full range of compatible services, covering backup, replication and disaster recovery technologies, with our Zerto, Veeam and VMware partners.

OVHcloud at a glance

 <p>1.5 Million Customers Worldwide</p>	 <p>30 Datacentres Across 4 Continents</p>	 <p>20 Tbps Bandwidth Capacity</p>	 <p>3,500 vCenters</p>	 <p>34 PoPs (Points of Presence)</p>
